MOSQUITA MUERTA WINES

SAPO DE OTRO POZO
MALBEC - CABERNET SAUVIGNON

No matter where he falls, his presence is imposing. Even if uninvited, he cannot go unnoticed. "Sapo de otro pozo" is the outsider who likes to play in the visiting team.

VARIETIES

65% Malbec – 35% Cabernet Sauvignon

VINEYARD LOCATION

Uco Valley, Mendoza.

HARVEST

Harvest is conducted manually, selecting the best grapes in the vineyard.

Grapes come from carefully selected estates in the Uco Valley, at altitudes ranging between 1000 and 1300 meters above sea level (3280 - 4265 FASL).

This region was chosen because it is among the best in Argentina to achieve wines with good concentrations and complexity.

WINEMAKING

Fermentation takes place in concrete tanks. The different Malbecs are produced separately in small concrete vats. The Cabernet Sauvignon is fermented with work prioritizing the enhancement of fruitiness and structure.

Sixty percent of the wine is aged for 10 to 12 months in second and third use French oak barrels. The rest is aged in concrete vats. Once aging is completed, the final blend is assembled and bottled.

TASTING NOTES

The nose offers notes of ripe red peppers, red berries and bitter chocolate. The palate is structured, fruity, with smooth tannins and a long finish.

The blend of these varieties integrates the fruit, structure and tannins of Cabernet Sauvignon with the freshness, intensity and smoothness of Malbec.

It may contain natural sediments, due to its light filtration process.
